

**Template Files for the
IVIE RMI-4L and RMI-8L
remote controls**

The IVIE RMI-4L and RMI-8L control products are labeled in a 2 step process.

First - a pdf template file is used to print sticky back labels on a pre-cut sheet of labels (available from IVIE). The label is then separated from the sheet, and placed sticky-side down into the recessed label area of the RMI-4L or RMI-8L.

Second - place a frosted sticky-backed overlay (also available from IVIE) over the label in the recess of the RMI-4L or RMI-8L.

This provides a professional print quality label, with a protective overlay that prevents scratching, smearing, etc. These labels can be printed on either an ink jet, or laser jet printer. Please note when printing that the scale must be 100% on the printer, and NOT scaled to fit, or the print will not line up with the die-cut labels on the sheet.

RMI-4 Template – Universal file - This file will print identical names for all labels on the sheet.

RMI-4 Template – Individual file - This file will print individual names for each label on the sheet.

RMI-8 Template – Universal file - This file will print identical names for all labels on the sheet.

RMI-8 Template – Individual file - This file will print individual names for each label on the sheet.
